

CARAVAN FILTER

Contains:

SILVER STABILIZING CARBON

(with unique Anti-Bacterial properties for premium water filtration)

Features:

Simple to Use

Easy to Adapt

Contains Silver Stabilizing Carbon

Not necessary to refrigerate between trips (however we do recommend this if possible)

Refillable / Re-usable

Multi Use - Caravans, Inline, with hoses, home, office or for portable use. Standard Carbon filters do not qualify as well as Silver Carbon in these applications.

Suits any general filtration use where taste/odour and chemical extraction are desired. However, we are targeting the demand within the Caravan Fraternity where the simplicity of this filter rivals all other Van filters on offer today.

When travelling around the country side you can't guarantee the quality of the water supply. More than often it is untreated water which can quickly introduce bacteria into the porous carbon fibres which ultimately will result in the water taking on a bad taste/odour or both.

We counter this by using a silver activated carbon where bacteria are not able to colonize in the presence of silver ions. The result of this is longer life of the filter and a much cleaner, more pleasant tasting water, regardless of if you are consuming treated or untreated water supplies.

We've set this filter up with 1/2" brass male connectors. We've also supplied 1/4" Quick Connect Nipples so this filter can be introduced into 1/4" filter line, commonly found in vans and undersink applications.

INCLUDED:

1/2" Male Threads

1/4" Quick Connect Tube Fittings

2 Mounting Brackets to secure the filter in ANY location

Filter Life: 12 - 24 months (pending usage)

Flow Rate: The system can function at 20Lt/min, **HOWEVER**, we recommend using the system at 10Lt/min for complete chemical extraction.
